

My favourite class is the drone class. It is at 10 o'clock every Saturday morning. We learn how to make a drone and the drone theory. Let me tell you what the drone has. It has four small wings, a big body and a small camera. There is a big controller to control the drone and a big VR glasses to transfer the photos that the drone's camera has taken.

I like this class because it is so exciting and interesting. I still can't control the drone. I hope I can control the drone by myself soon.
